Agenda: The EPA encourages utilities of any size to establish an asset management program. The first step in managing your assets is knowing what your utility has and where it is. We'll discuss use of mobile GIS, GPS, paper records, and institutional knowledge to map your collection or distribution system and build a geographic information system (GIS). We'll also cover the basics of asset management for treatment, distribution, and collection systems at small to mid-size facilities, including managing work orders and plant assets. A combination of lecture and hands-on exercises will enable participants to learn about the latest technologies and best practices. The next time you ask for capital improvements or a rate hike, have the data to back up your request!
